MINERALISED ZONE EXTENDED AT CROYDON

KEY POINTS

- . **Polymetallic vein style mineralisation has now been intersected in all six holes drilled to date in the Anomaly A2 area at Croydon.**
- . **The mineralised system has now been intersected over a zone at least 400 metres in width and 1,050 metres in length.**

Gold Aura Limited (Code: **GOA**) advises that further polymetallic vein style mineralisation has been intersected in the drilling program located approximately 40 kilometres north of Croydon in North Queensland. Drilling is currently being focussed on the A2 Magnetic Anomaly within the Wallabadah EPM 13775 where hole A2-001 last year discovered significant polymetallic vein style mineralisation under some 115 metres of younger cover rocks. GOA is highly encouraged with the results of the drilling program to date.

DETAILS

Hole A2-006, collared 200 metres west of discovery hole A2-001 and drilled to the north on an inclination of 60 degrees, has intersected significant vein style polymetallic mineralisation. The mineralised system has now been intersected in all four completed holes and the two (A2-005 and A2-006) currently in progress.

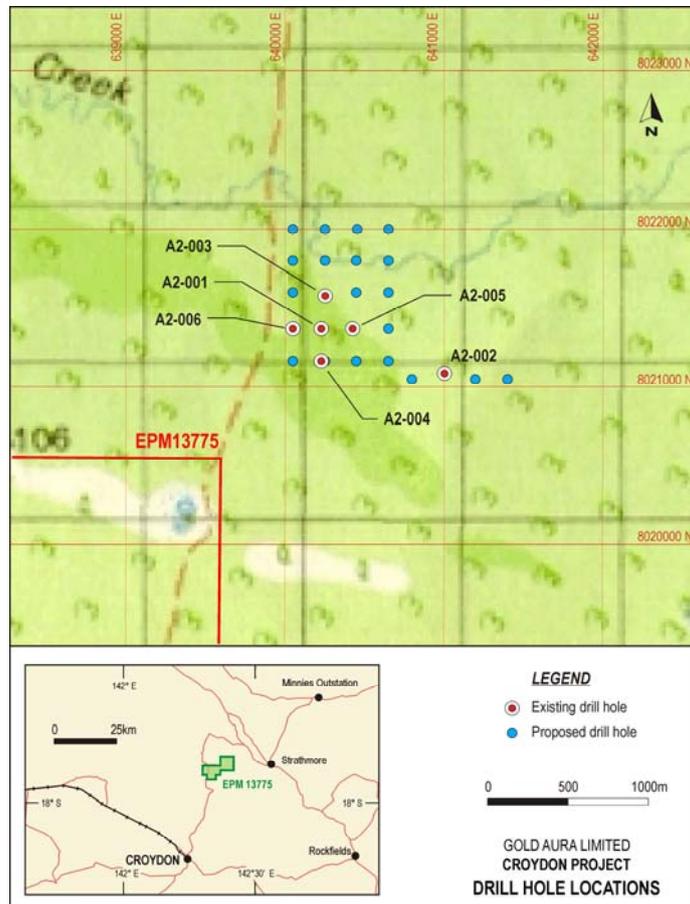

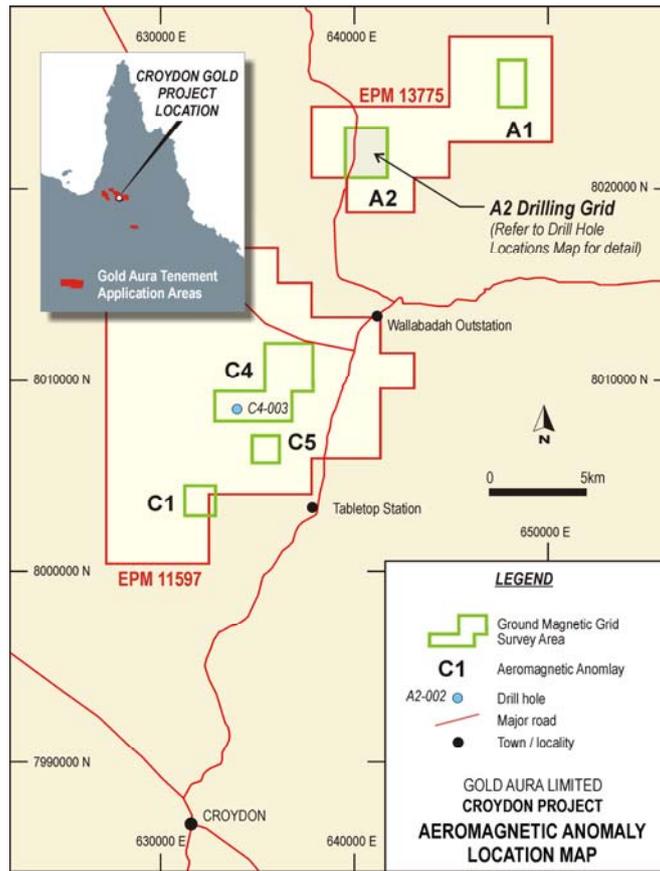

Polymetallic mineralisation has now been intersected in a zone at least 400 metres wide and at least 1,050 metres in length.

The discovery hole A2-001, which is being followed up in the current program, intersected significant levels of zinc, tin, silver and copper including;

- . **133.0 metres at 1.1% zinc, 18.4 g/t silver, 0.15% tin and 0.035% copper and**
- . **5.05 metres at 8.0% zinc, 180 g/t silver, 0.57% copper and 0.58% tin**

CORRECTION

It has been noted that there has been a typographic error in the 133.0 metre interval stated for discovery hole A2-001 in announcements dated 13 June 2007, 16 July 2007 and 24 July 2007. This related to the copper value which should be 0.035% and not 0.35% as stated. All initial, previous and subsequent announcements report the correct copper value of 0.035%.

FORWARD PROGRAM

The forward program at Croydon will involve further drilling in the highly prospective Anomaly A2 area and initial drill testing in the Anomaly A1 area which is located approximately 8 kilometres north east of Anomaly A2. Two drill rigs will continue to be utilised.

ABOUT GOLD AURA LIMITED

Gold Aura's principal activity is the global exploration for world class mineral resources. Its current focus is directed towards an accelerated follow-up drilling program of the newly discovered polymetallic mineralisation at Croydon, the resource infill drilling program at Gameta in PNG and the commencement of exploration at Sao Chico in Brazil. Gold Aura is also continuing with exploration on its promising gold projects in Kazakhstan and China.

The information contained in this report relating to exploration results is based on information compiled by Mr Ken Chapple, Managing Director of Gold Aura Limited. Mr Chapple is a Member of the Australasian Institute of Mining and Metallurgy and has the relevant experience in relation to the mineralisation being reported upon to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Chapple consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Yours faithfully

GOLD AURA LIMITED
